S106 Specification
Detectable tape

Product code P8966-BL, P8966-RD, P8966-YL
Colours: Blue, Red and Yellow

Machine coated self-adhesive Tape
Strong, flexible and versatile whilst still being detectable
Suitable for use within a food processing environment

Specification
Width	50mm
Roll Length	50M
Materials	Paper, Laminate, adhesive, aluminium foil, glossine liner

Tape contains a thin layer of metal foil, so can be detected via metal detection devices

The adhesive is a high coat weight rubber based hot melt designed to give superior initial tack on moist, rough or difficult surfaces.
The components of the adhesive comply with FDA regulation 175.105 on indirect food contact. The glassine liner is designed for use on automatic applicators if required.
This metal detectable tape is suitable for a variety of food processing applications such as labelling (E.g. Quality Control), securing items where regular tapes are not allowed, packaging products where regular packaging tapes represent a foreign body risk, light engineering applications and also asset management such as labelling machinery or tools.
